## Smoking around kids exacts a high toll

But American children's exposure to secondhand smoke at home has dropped significantly since the mid-1990s.

Mon, Jun 28 2010 at 5:49 PM EST

**NEW YORK** - American kids can breathe a sigh of relief, according to a study out today in the journal Pediatrics that finds their exposure to secondhand smoke at home has dropped significantly since the mid-1990s.

Exposure to secondhand smoke is known to cause lung problems, asthma, ear infections and contribute to sudden infant death syndrome. Smoking during pregnancy has also been linked to a host of psychological problems in children, such as attention deficit/hyperactivity disorder and antisocial behavior. But scientists have had a hard time teasing out the direct effects of tobacco versus lifestyle factors and mental health in the home.

In one of the three studies in the journal *Pediatrics*, Dr. Marie-Jo Brion of the University of Bristol, U.K., and colleagues tried to disentangle those factors by analyzing two long-term studies from Britain and Brazil.

Both studies had started in the early 1990s. Among British mothers, 16 percent reported smoking during pregnancy, compared with 29 percent in Brazil.

The researchers initially found that at age 4, the kids whose mothers smoked had higher levels of hyperactivity, peer problems and bad behavior, such as bullying, cheating and lying. The kids didn't have more emotional problems, however.

After accounting for the parents' psychological health, economic position and whether the father smoked, only the

bad behavior remained highly associated with having a mother who smoked, with odds increased up to 82 percent.

Brion said her results weren't bulletproof evidence that exposure to tobacco in the womb causes behavior problems directly, but that it was likely to do so.

Even if a prospective mother doesn't smoke, being around others who do could still affect her unborn child, according to the second study in *Pediatrics*.

Researchers from the University of Hong Kong studied 6,800 school-aged children whose mothers weren't smokers. If their dads smoked daily, however, they tended to weigh more compared to those kids who weren't exposed to secondhand smoke in the womb or after birth. On average, they packed on an extra pound or so.

The third study in *Pediatrics* shows that fewer kids are being exposed to smoke in the home. Dr. Gopal K. Singh of the U.S. Department of Health and Human Services in Rockville, [Maryland](#), and colleagues report that overall, about 5.5 million American children, or 7.6 percent, were exposed to second-hand smoke in the home in 2007. By contrast, that number was 35 percent in 1994.

"That was a fairly dramatic drop," Singh said. "It is a positive message in the sense that exposure rates have declined." However, he and colleagues note that the 7.6

percent figure falls short of the 2010 revised national target for reducing childhood exposure to tobacco smoke at home, which is set at 6 percent.

Almost 8 in 10 households have smoking bans now, according to Singh, which is nearly twice the number seen in the early 1990s. "That's a big difference in attitude," he said.

In their study, Hawaiian/Pacific Islander children had the lowest exposure rates, while black children had the highest. Children from poorer households and with less-educated parents were at highest risk. Singh said the decline in secondhand smoke had been much slower in these groups.

Some states stuck out. For instance, less than 2 percent of kids in [California](#) and [Utah](#) lived with smokers, while more than 17 percent did so in [Kentucky](#) and [West Virginia](#).

While the study did not test smoking during pregnancy, national data show that around 1 in 10 pregnant women light up at some point, according to Gary A. Giovino of the School of Public Health and Health Professions at the University at Buffalo, N.Y.

"The problems of smoking and pregnancy have come down substantially over the years," said Giovino, who was not involved in any of the new studies. "But we still have a long way to go."
