Refi Rates Hit 3.25%

If you owe less than \$729,000 on your mortgage, you probably qualify for the President's Making Home Affordable Program. This program helps homeowners refinance and take advantage of today's

historically low interest rates. If you are a homeowner and you haven't looked into refinancing recently, you may be surprised at how much you can save.

Adult stem cells that do not age created

From ANI

Washington, Oct 2: University at Buffalo researchers have engineered adult stem cells that do not age, which means that scientists can grow them continuously in culture.

The discovery could speed development of cost-effective treatments for diseases including heart disease, diabetes, immune disorders and neurodegenerative diseases.

To create the new cell lines - named 'MSC Universal' - the team genetically altered mesenchymal stem

cells, which are found in bone marrow and can differentiate into cell types including bone, cartilage, muscle, fat, and beta-pancreatic islet cells.

Mesenchymal stem cells have a limited life span in laboratory cultures, so scientists and doctors who use the cells in research and treatments must continuously obtain fresh samples from bone marrow donors, a process both expensive and time-consuming.

The age-less stem cells appear to function as regular mesenchymal stem cells do - including by conferring therapeutic benefits in an animal study of heart disease.

"In the case of stem cell treatments, isolating stem cells is very expensive. The cells we have engineered grow continuously in the laboratory, which
