

Using The Panopto Video Mashup tool and UBlerns

Instructors can now link their Panopto videos in UBlerns with the “Mashup” tool called “Panopto Video” This can be accomplished from the “Content Editor” located in multiple Content tools (Ex Assignments, blogs, wikis etc).

Here is an example using the “Content editor” when creating an “Assignment”

Go to any content area (ex: “Course Documents”, “Assignments” etc) Click “Assignment” from the “Assessments” button. Enter a “Name” for the assignment. From the “Content Editor” click “Mashups” and select “Panopto Video” You will see a screen like the below with your videos

Select the checkbox in front of the video that you want to insert and click “Insert Videos”

Fill in the rest of the assignment options and click “Submit”

*** Note *** Each time you log into UBlerns you will be prompted with a **sign-in/refresh** screen the first time you go to access your Panopto Folder. Click **sign in** which will open either a new window or tab signing you into Panopto. You’ll then close this window or tab and click **refresh** to start using panopto within UBlerns.
