

### Did you know?

The Department of Philosophy offers graduate study in areas where philosophical ideas and methods are applied in the real world, including applied ontology, bioethics, philosophy, politics and economics. Applied ontology helps to solve problems in information and data science. Philosophy, politics and economics uses a combination of political philosophy, formal and experimental methods and social science to gain new insights into complex social and political problems.

## Jumpstart your Career

Our department is known for its high-quality teaching, robust faculty-student interaction within a vibrant academic community and the successful placement of our graduates in both academic and extra-academic positions. We support students' career paths by providing professional development opportunities in each area. Graduates from our PhD program who focus on ontology have a 100% success rate finding employment as highly paid senior ontologists in biomedicine, government and finance. Our ontology graduates will continue to be in very high demand across several fields.

The highly applicable theoretical knowledge PPE graduates gain from our program opens the door to both academic job opportunities and consulting work with a strong social and political focus. We also have strong placement numbers on the academic job market, as the high quality of instruction in our graduate program and the high degree of faculty-student interaction in a lively academic community prepare students to carry out original philosophy research and be excellent instructors.

## Application Requirements

- Completed online application
- Electronic transcripts
- 3 letters of recommendation
- Personal statement
- Resume/CV
- \$75 application fee (waivers available)
