HEALTH INEQUITIES WORKSHOP SERIES

Socioeconomic Factors that Produce Health Inequities

The social determinants of health are the conditions in the environments where people are born, live, learn, work, play, and age that affect health outcomes. This workshop explores how the social determinants of health create causal pathways to adverse health outcomes. It will examine how these social determinants or socio-physical conditions in the neighborhoods where people live can cause specific adverse health outcomes, such as low birth weight and premature death.

DATE: Thursday, April 6, 2023

TIME: 3:00 – 4:30 PM

LOCATION: Online via Zoom
