

Edward Hurley

Institute for Myelin and Glia Exploration
Research Technician

Ed has more than thirty years of experience in microscopy. As an undergraduate at Canisius College, he developed an interest in electron microscopy. After graduation he went to Roswell Park Cancer Institute's Electron Microscopy Lab. There he learned all facets of transmission electron microscopy and scanning electron microscopy.

He also worked at Hauptmann-Woodward doing electron diffraction. Confocal microscopy was added to the facility in 1990.

He became an expert in digital image acquisition and analysis, which was also applied to live cell microscopy.

Ed is a coauthor on numerous papers and his images have appeared in many more publications and grants.

Ed started with the Institute for Myelin and Glia Exploration in November 2010 and hopes to use his skills to make important advances against Krabbe's Disease.
