

Riley “Cece” Robbins

Office Assistant

Institute for Myelin and Glia Exploration

Ms. Robbins has been a member of the Institute since May 2022. Her primary responsibility is to assist in monitoring the Institute's federal and privately sponsored grants, but she additionally performs routine office tasks, such as getting the mail and processing credit cards.

Riley is currently studying applied mathematics at the University at Buffalo and is well on her way towards earning a bachelor's degree. She aspires to work in a research-oriented setting – specifically, using mathematical modeling and data science techniques with a multidisciplinary team. However, she plans to postpone graduate school and enter the industry directly after graduation.

Previously, Riley has worked as an intermediate mathematics tutor at Erie Community College, and as an advanced mathematics tutor at University at Buffalo. Though these were wonderful experiences, Riley is proud to support the scientific community in her current administrative capacity.
