BUPRENORPHINE: MECHANISM

Death rates:

MAJOR FEATURES OF BUPRENORPHINE

Partial agonist at mu receptor

- Comparatively minimal respiratory suppression and no respiratory arrest when used as prescribed

Long acting

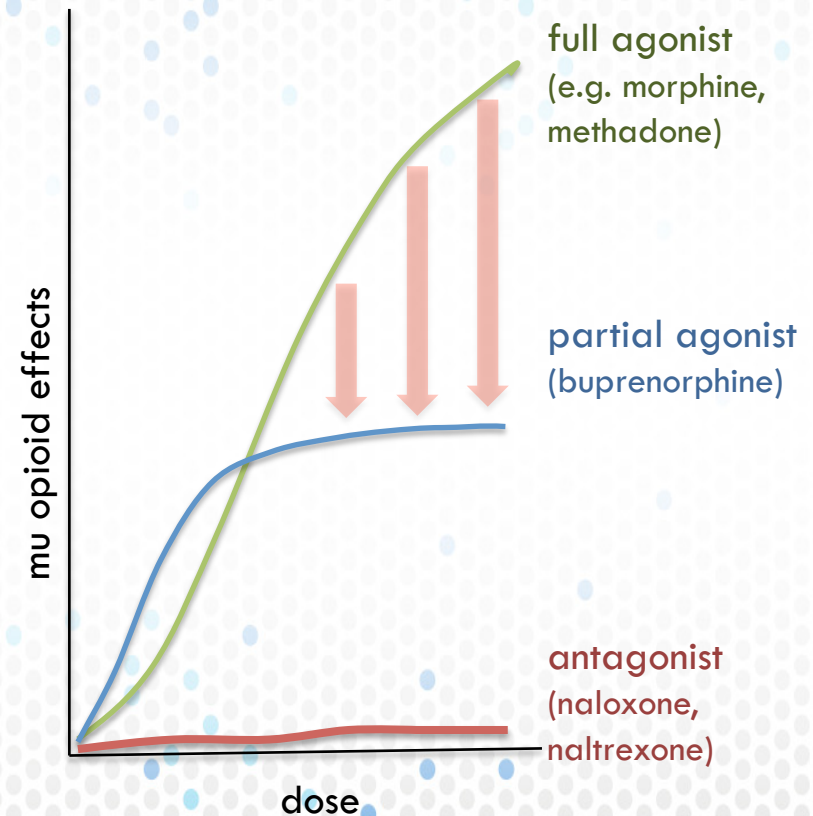

- Half-life ~ 24-36 Hours

High affinity for mu receptor

- Blocks other opioids
- Displaces other opioids
 - Can precipitate withdrawal

Slow dissociation from mu receptor

- Stays on receptor for a long time

This map displays the Buffalo, New York metropolitan area, highlighting the locations of 20 hospitals. The hospitals are marked with black 'H' icons, and some are also marked with blue or yellow icons. The map includes major roads, water bodies, and surrounding towns. The hospitals are distributed across the area, with a higher concentration in the central and northern parts of the city.

Add Event

Clinic Dashboard

Welcome to the New York State Medication Assisted Treatment and Emergency Referrals (MATTERS) system. You will be asked to provide some basic information about yourself along with your medical and substance use history. You will then be able to select which clinic location you desire to be seen at after discharge. Once you select the clinic location, you will receive a confirmation of your selection via email (if you provide an email address). In the next day or two, you will receive a call from the clinic to solidify a time for your appointment. It is very important that you provide accurate phone contact information.
