

Eric Pitman Summer Workshop in Computational Science

Intro to

...an introduction to R, statistics, programming, and
getting to know datasets

CENTER FOR **COMPUTATIONAL RESEARCH**

 **University at Buffalo**
The State University of New York

Our Plan for the Workshop

- Introduce the R language
- Do some programming
- Tours, demos, guest lectures: sample some science & engineering
- Examine, model, and visualize datasets
- Read about, discuss data science
- Project: explore materials science design questions

Our (Informal) Plan for the Workshop

- No grades
- Collaborate
- Respect
- Learn something!
- Life is open internet (so is the workshop)

Data is Everywhere

- For example:
 - Science/engineering/medicine
 - Environmental science/Social science/Law enforcement
 - Finance and marketing
 - Social media
- How do we come to an understanding of what a dataset contains?
- Can we draw conclusions from a dataset?
- Let's taste the complexities for ourselves

“Big Data” means Three Things

Volume: lots of data

Velocity: coming at you fast—Twitter, 7+TB/day

Variety: text, pictures, video, etc.
